New software 'COM-SUR'™ **Standardizes** Incident Reports and **Enhances** Surveillance for **all** stakeholders **worldwide**
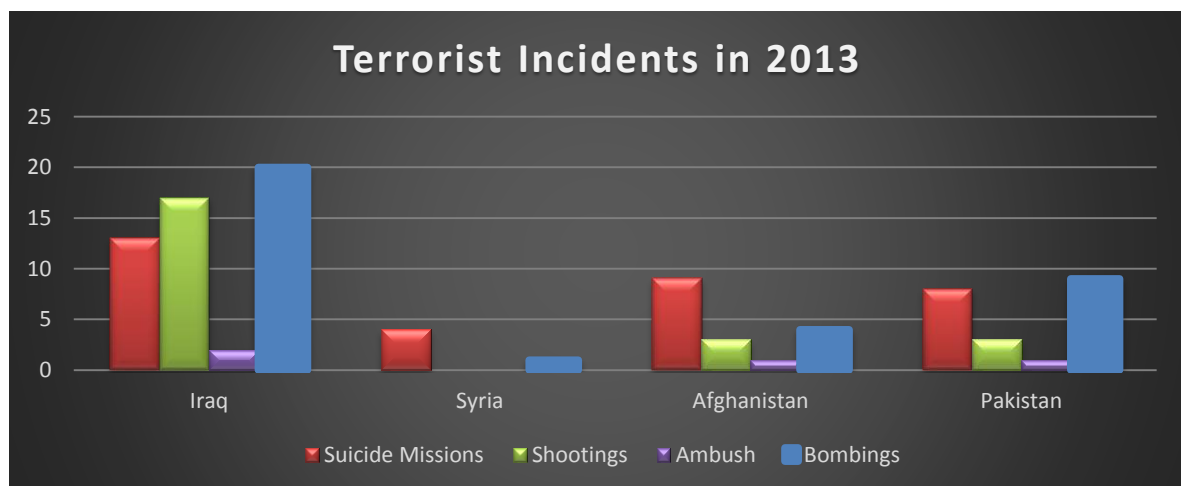

Hayagriva Software, is showcasing 'COM-SUR', an exceptional tool to create **Standardized Intelligent Incident Reports** and **Enhance Surveillance**, at the **Security Exhibition and Conference** being held in **Melbourne 4-6 June 2014.** <mark>BOOST A28</mark>.

What does COM-SUR do best?

Com-Sur **Standardizes Incident Reports worldwide**. Standardization **ensures** that:

1) All stakeholders '*speak the same language*'. Think of various stakeholders sharing one '**industry standard**' incident report, as opposed to **different** kinds of reports.

2) **Meta-Data** that is gathered delivers '**intelligence**' through '**patterns**'. *"What kind of incidents are taking place at what locations, at what time, on which particular days" and so on*. This makes it possible to take **preventive** action, and **improve** processes.

Above data is not real, and has been used only as an example

3) **Crime** is solved **faster**. Since Com-Sur's Standardized Incident Reports are created in formats like **PowerPoint**, **Word**, and **PDF**, **sharing** them between agencies that may be located in **different cities**, or even **countries**, becomes very **easy** and **swift**. Using Com-Sur, users can **convert video** (in **real-time** or **recorded**) into **screenshots**, **describe** them, and create an entire **storyboard**.

Com-Sur also makes it possible to **embed** the relevant **video clip** within the report in order to deliver a **'complete package'**. This means that Law Enforcement and other relevant agencies receive **every bit** of relevant information, giving them time to **speedily** concentrate on, and solve the case.

Further, Com-Sur lets users create incident reports using images captured by **cameras** or **mobile phones** as well. Thus, users can report incidents **even** from **those** regions which are **not covered** under surveillance cameras.

What else does COM-SUR do very efficiently?

Com-Sur **converts** video (in **real-time** or from **recorded** footage) into **rapidly viewable screenshots** enabling users to **review hours** of footage in **minutes**. Things that '**seem in order**' are '**discovered**' because of this feature; example, a **recce**.

Another benefit that Com-Sur brings to the table is its ability to **share large** amounts of images and their related information as a '**Contact Sheet**' (**thumbnails** with their relevant **description**). An example of this would be sharing details of **hundreds** of **suspects** at various borders and entry points, all delivered in a few pages of a Word/PDF document.

Finally, Com-Sur acts as a great **training material creator**. Since Com-Sur captures screenshots from **any video**, users could look up videos on sites like **YouTube**, capture screenshots, add **subject matter expert** comments, embed the link within the slide, and create **customized** training material.

Gautam Goradia, CEO & MD, Hayagriva Software states "*in order that the entire* ***world*** *benefits from Com-Sur, we're introducing a* ***free*** *Com-Sur version. This means that even* ***home*** *users and* ***smaller*** *businesses can create standardized incident reports, and share them quickly with relevant agencies. This also means that the* ***meta-data*** *from incidents* ***across an entire country*** *becomes available to* ***draw patterns*** *from, which will be* ***invaluable*** *to* ***prevent*** *and* ***thwart*** *future incidents.*"
